### SPOTLIGHT

December 18, 2020  
Edition: 1

We're hoping all are well and being safe dealing with Covid-19. Our dealership is taking steps to help keep you informed in these times. We will be sending these "Spotlights" to you on a regular basis to go over trends, issues, products, ideas and results based on agronomy. This will be an interactive program so you can send us any questions or problems that you may have. We will investigate them and have answers for you in a timely manner. Our Wolf Farms Precision team wants to be your professional planter dealership.

## Planning for Spring 2021

Here are some of the things we feel are important at this time of year:

- Review your planter performance both from planting season and the results you saw during harvest.
  - Did the planter operate correctly during planting?
  - Were there undue problems or breakdowns?
  - Did you see the emergence that you desired?
  - Was your harvested crop affected by any type of planter failure?
  - Does your planter need consumables replaced? (disc openers, parallel linkage)
- Consider component service.
  - Meters have many wear items in them. Let us run them in our component shop. We will service any meter and give you a performance report. This is a very inexpensive way to ensure that your meters function as good as they did when new.
  - SpeedTube, vDrive, SmartFirmer, vApply are all serviced in our shop.
  - We can do a complete planter evaluation in our shop. From hitch to closers, frame repairs, hydraulics, general wear and all of the consumables.
  - Contact us with any questions [chuck@wolffarmsprecision.com](mailto:chuck@wolffarmsprecision.com) or 815/977-0968
